Edit User Defined Game or Application

Game/application name: Apache

Game or Application Definition

A game or application is made up of one or more TCP/UDP port range. Each incoming port range can be translated into a different internal (private network) port range.

Protocol	Port Range		Translate To			
Any	0	0	0	0		Add
TCP	6881 - 6889		6881 - 6889		Edit	Delete
TCP	80 - 80		80 - 80		Edit	Delete
TCP	443 - 443		443 - 443		Edit	Delete

Port Forwarding

Port Forwarding is used by devices, such as games consoles, and applications, such as servers, to make sure that data coming from the internet gets to the device that needs to use it. When Port Forwarding is enabled, your BT Home Hub will send all incoming traffic for that application or game to the chosen device.
